AI ROAST GENERATOR

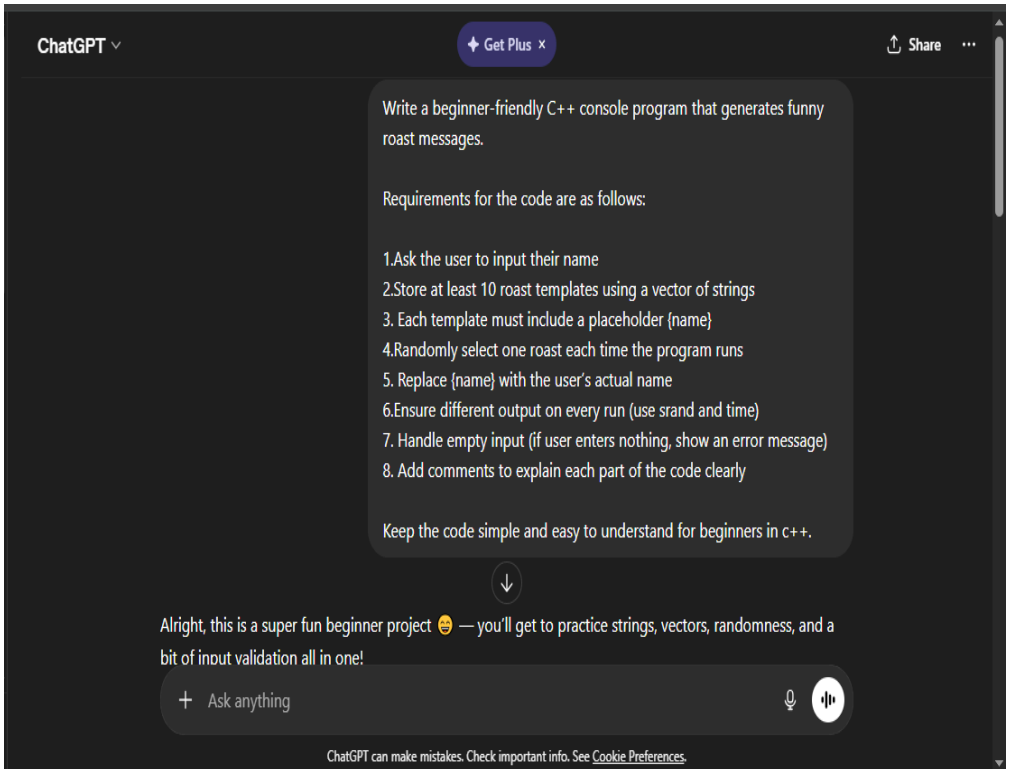
PROMPT 1: To get the necessary code with all the requirements.

Write a beginner-friendly C++ console program that generates funny roast messages.

Requirements for the code are as follows:

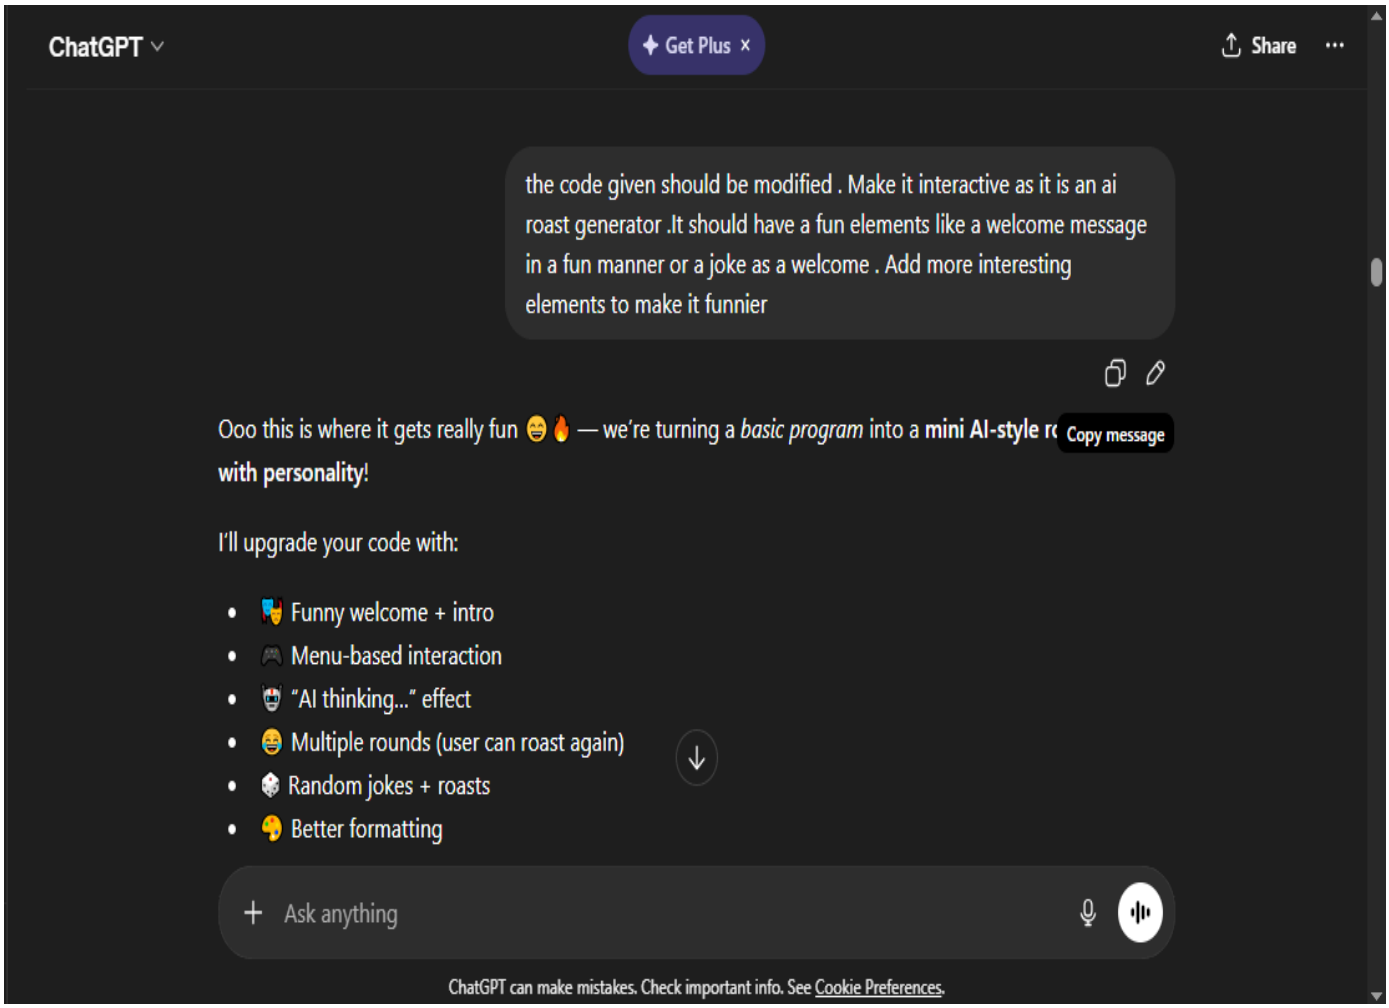
1.Ask the user to input their name
2.Store at least 10 roast templates using a vector of strings
3. Each template must include a placeholder
4.Randomly select one roast each time the program runs
5. Replace {name} with the user's actual name
6.Ensure different output on every run
7. Add comments to explain each part of the code clearly

Keep the code simple and easy to understand for beginners in c++.



PROMPT 2: Modifying the code (personalisation)

the code given should be modified . Make it interactive as it is an ai roast generator .It should have fun elements like a welcome message in a fun manner or a joke as a welcome . Add more interesting elements to make it funnier



Bug Fixing

```
PROBLEMS    OUTPUT    DEBUG CONSOLE    TERMINAL    PORTS

PS C:\c++\FOCP-II-LAB-MANUAL-main> C:\c++\FOCP-II-LAB-MANUAL-main\errorairoastgenerato
r.exe
 Enter at your own risk... feelings may be hurt!

 Joke: Why do programmers prefer dark mode?
Because light attracts bugs

 Enter your name (or type 'exit' to quit): exit

 AI is analyzing your personality...

 ROAST RESULT
exit doesn't write code, they summon chaos.

 Roast Level: Savage
----------------------------

 Enter your name (or type 'exit' to quit):

 AI is analyzing your personality...

 ROAST RESULT
{ name } writes code so slow that even a turtle switched careers.

 Roast Level: EMOTIONAL DAMAGE
----------------------------

 Enter your name (or type 'exit' to quit):
```

Prompt for correcting both the bugs

The code has an option to exit but when the user opts to exit , the code doesnt stop. It prints the joke with the exit word in case with both uppercase and lowercase and uppercase exit word. rectify that.

also blank input is also considered it prints the original joke template

The code has an option to exit but when the user opts to exit , the code doesnt stop it prints the jokw with the exit word with both uppercase and lowercase and uppercase exit word. rectify that

Nice catch—that's a very real bug and perfect for your assignment 😄🔥

Copy message

Right now your program is **treating "exit" like a normal name**, so it prints a roast instead of stopping.

❌ WHY THIS IS HAPPENING

Your condition is:

```
C++
if (name == "Exit")
```

So it only works when the user types exactly:

That combo = easy full marks 💯

also blank input is also considered it prints the original joke template

Ahh yes—that's another classic bug 😄🔥

Copy message

Right now when you press **Enter without typing anything**, your program still continues and prints a roast like:

```
's code runs so slow...
```

Not a great look for an "AI" 😂

Corrected output

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

```
Enter your name (or type 'exit' to quit): exit

AI shutting down... Stay roasted!
PS C:\c++\FOCP-II-LAB-MANUAL-main>
```

```
Enter your name (or type 'exit' to quit):
Hey! Even AI needs a name to roast  Try again.

Enter your name (or type 'exit' to quit):
