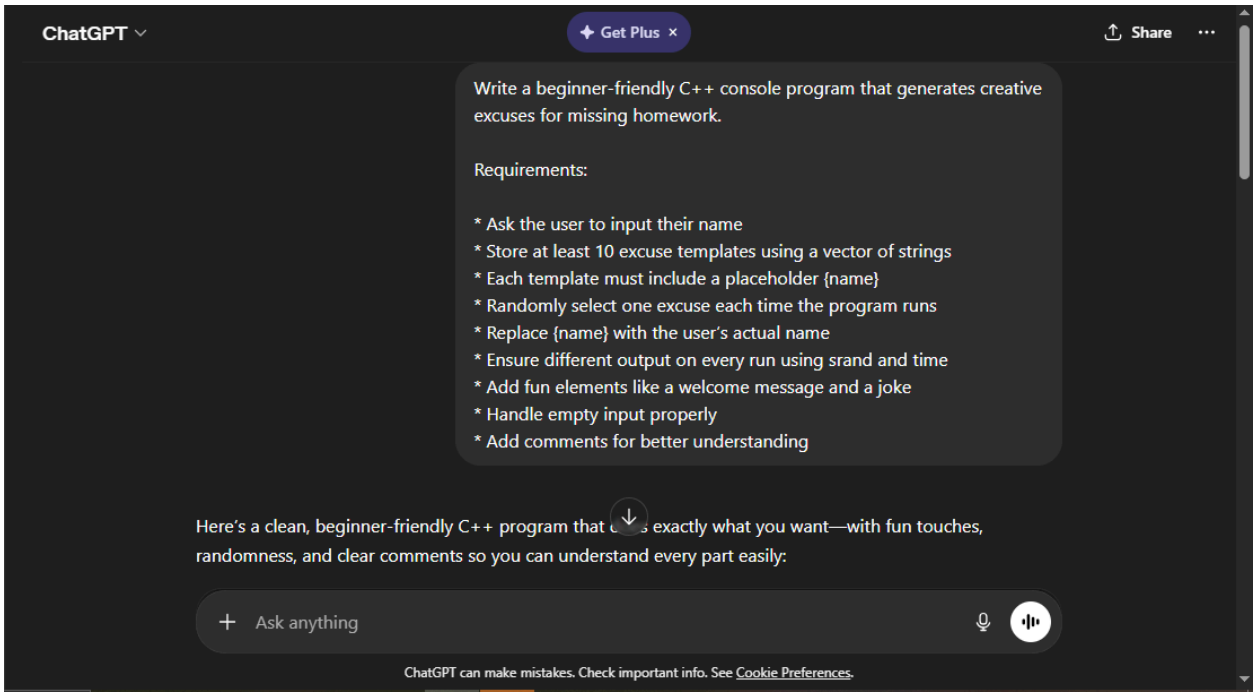
STUDENT EXCUSE GENERATOR

PROMPT 1: To get the necessary code with all the requirements.

Write a beginner-friendly C++ console program that generates creative excuses for missing homework.

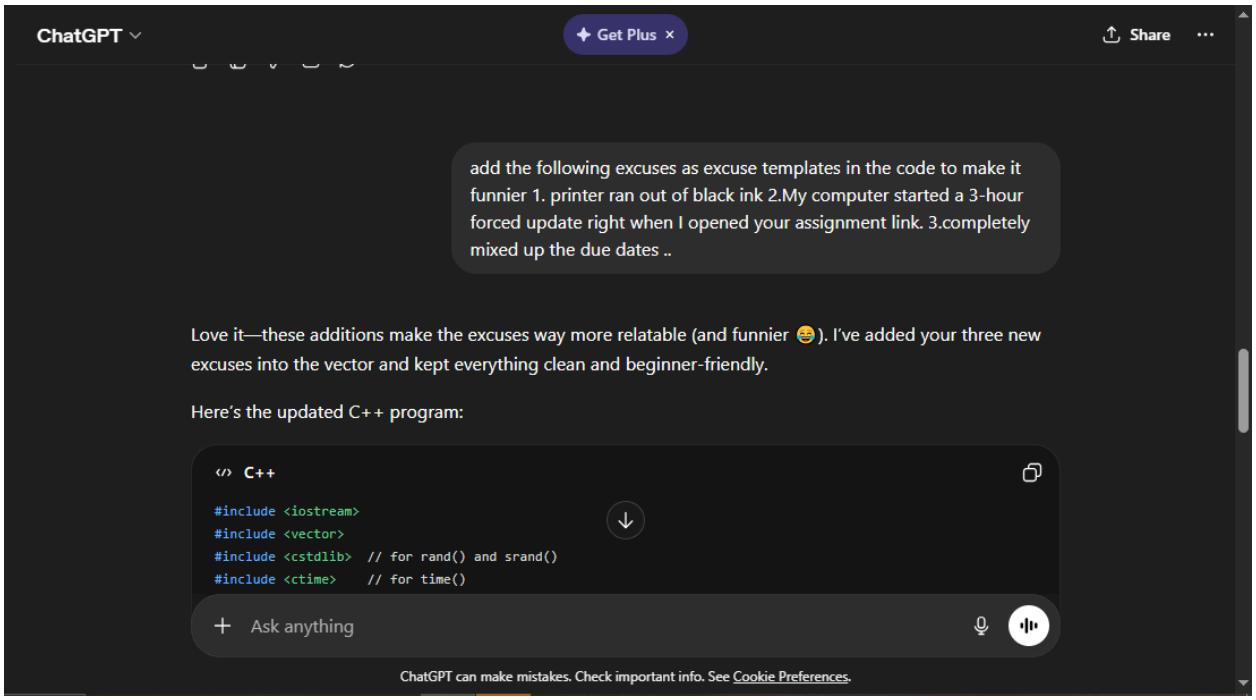
Requirements:

- Ask the user to input their name
- Store at least 10 excuse templates using a vector of strings
- Each template must include a placeholder {name}
- Randomly select one excuse each time the program runs
- Replace {name} with the user's actual name
- Ensure different output on every run
- Add fun elements like a welcome message and a joke
- Handle empty input properly
- Add comments for better understanding

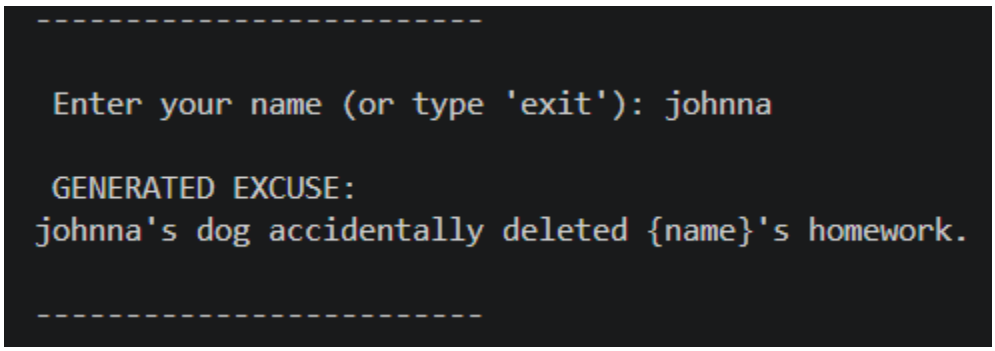


PROMPT 2: Modifying the code (personalisation)

add the following excuses as excuse templates in the code to make it funnier 1. printer ran out of black ink 2.My computer started a 3-hour forced update right when I opened your assignment link. 3.completely mixed up the due dates ..



Bug Fixing



.

```
Welcome to the AI Excuse Generator 2.0
 Warning: Use these excuses at your own risk!

 Joke: Why didn't the student bring homework?
Because the dog installed Windows updates

 Enter your name (or type 'exit'): johnna mary

 GENERATED EXCUSE:
johnna completed everything but forgot to save the file.

-------------------------

 Enter your name (or type 'exit'):
 GENERATED EXCUSE:
mary lost the file due to a sudden power cut.
```

Prompt for correcting both the bugs

1. program replaces {name} only once in a string. If {name} appears multiple times, the rest are not replaced.

2..My program is not reading full names. If I enter "Johnna Mary", it reads Johnna and mary separately. How do I fix this?

program replaces {name} only once in a string. If {name} appears multiple times, the rest are not replaced.

Ahh yes—that's a classic issue, and you've spotted it correctly 👀

If `{name}` appears multiple times, using `find()` just once won't fix all occurrences. You need a **loop that keeps searching and replacing until no** `{name}` **is left.**

Good news: you were *very close already*. Here's the **correct and reliable fix** 👇

✅ Replace ALL `{name}` occurrences

Replace your current replacement code with this:

C++

My program is not reading full names. If I enter "Johnna Mary", it reads Johnna and mary separately. How do I fix this?

Ahh, that's a super common C++ input issue—and an important one to fix! 😄

🚨 What's happening?

If you use:

C++

```
cin >> name;
```

it **stops reading at the first space**, so:

```
Johnna Mary  →  only "Johnna" gets stored
```

Ask anything

ChatGPT can make mistakes. Check important info. See Cookie Preferences.

Corrected output

```
 Enter your name (or type 'exit'): Johnna Mary

 GENERATED EXCUSE:
Johnna Mary's dog accidentally deleted Johnna Mary's homework.

-------------------------

 Enter your name (or type 'exit'):
```
